APERTURE

DEPTH OF FIELD

WHAT IS DEPTH OF FIELD?

The range of picture staying in focus

Aperture and DOF

FIGURE 2.29

Wide aperture: focused in front.

FIGURE 2.30

Wide aperture: focused at the rear.

FIGURE 2.31

Small aperture: entire range in focus.

**Photos from Crime Scene Photography
by Edward (Ted) Robinson**

MAKE A GUESS!

CSI investigators use a high FStop, f11 or higher. This shrinks the aperture and creates a larger depth of field. Why do CSI investigators do this?

Think about if your taking a picture through a fence. What would you do in that case?

Cardinal RULE - **Maximize your depth of field.**

Picture courtesy: Megan Kughen

MAKE A GUESS!

Forensic Photographers use high f stop, f11 or higher but why don't they use the highest?

Diffraction

<https://visualeducation.com/lens-diffraction/>

DON'T FORGET THE EXPOSURE TRIANGLE!

- Setting up a higher f stop might decrease the brightness of your image.
- To fix this, set up your shutter speed accordingly for a poorly dim environment
- If you need to lower your shutter speed - PUT IT ON A TRIPOD

DEPTH OF FIELD CHANGES WITH FOCAL LENGTH

<https://chattanooga-photo.org/the-artistic-uses-of-depth-of-field-controls/>

This is an additional consideration to your F-stop affecting your depth of field.

Zoomed out focal length (18mm) = Deep DoF

Zoomed in focal length (55mm) = Shallow DoF

Focal length: 300mm

Focal length: 70mm

TODAY'S LAB

Set up a small mock crime scene with a few pieces of evidence (large and small) and randomly dispersed across the scene so that the recording of the scene in photographs offers a challenge to the photographer. Think about evidence placement and DOF.

What we are looking for in close-ups

Your close-up images should be taken with a tripod,
Close enough to fill the frame, but not too close that you
Cause distortion (aka rounded edges).
